

**UNITED STATES DEPARTMENT OF THE INTERIOR
MINERALS MANAGEMENT SERVICE
GULF OF MEXICO OCS REGION**

NTL No. 2006-G14

Issue Date: June 12, 2006
Effective Date: July 12, 2006

NOTICE TO LESSEES AND OPERATORS (NTL) OF FEDERAL
OIL, GAS, AND SULPHUR LEASES IN THE OUTER CONTINENTAL SHELF (OCS),
GULF OF MEXICO OCS REGION (GOMR)

**Information Requirements for Exploration Plans and
Development Operations Coordination Documents**

This NTL is issued pursuant to 30 CFR 250.103 and provides guidance on the information requirements for OCS plans required by 30 CFR 250, subpart B. This NTL, along with NTL No. 2006-G15, "Guidance for Submitting Exploration Plans and Development Operations Coordination Documents," supersedes NTL No. 2003-G17.

Authority and Background

On August 30, 2005, Minerals Management Service (MMS) published final regulations in the Federal Register amending subpart B of 30 CFR part 250 (see 70 FR 51478). These regulations became effective on January 1, 2006. The revised regulations changed the subpart title to "Plans and Information." Please note that all of the regulatory citations used in this NTL are those in the published final subpart B regulations that will be codified in the next edition of the Code of Federal Regulations as 30 CFR 250.200 - 250.299.

In the revised final subpart B regulations, the contents of an Exploration Plan (EP), a Development and Production Plan (DPP), or a Development Operations Coordination Document (DOCD) are given at §§ 250.211 - 250.228 and §§ 250.241 - 250.262. Under § 250.201(c), MMS may limit the amount of information or analysis you must provide in such OCS plans to that which is necessary to ensure compliance with the OCS Lands Act (OCSLA), as amended, other laws, applicable regulations, and lease stipulations or provisions. Under this authority, and the authority in § 250.201(b), the MMS GOMR has established the contents of EP's and DOCD's for activities in the Gulf of Mexico (GOM) OCS. These contents, along with clarifying information, are provided in this NTL and its attachments.

See § 250.105 for the definition of "affected State." Item (1) of that definition delineates a geographical area as one component in determining when a State is an affected State. For a map showing these geographic areas, refer to the MMS Internet website at:

http://www.gomr.mms.gov/homepg/offshore/plans_permits/czmmaps.html

Proprietary Data

The information collected pursuant to 30 CFR 250, subpart B, is used to inform MMS, the States, and the public of planned exploration, development, and production operations on the OCS. It also ensures that OCS operations are planned to comply with statutory and regulatory requirements; will be safe and protect the human, marine, and coastal environment; and will result in diligent exploration, development, and production of leases (see § 250.199(e)(2)). Data and information that must be made available to the public without the consent of the lessee, and under what circumstances and times, are outlined at § 250.196(a) and (b). Pursuant to 43 CFR Part 2, Appendix E, sections (4) and (9), the MMS GOMR has determined that only the following information is exempt from disclosure:

- (a) The geologic objectives, BHL, TVD, and MD information on form MMS-137 (OCS Plan Information Form) in Attachment A;
- (b) Production rates and life of reservoirs under General Information at 30 CFR 250.243(c)(1);
- (c) Proprietary information in your description of any new or unusual technology you will use under General Information at §§ 250.213(d) and 250.243(e);
- (d) All items under Geological and Geophysical Information at §§ 250.214 and 250.244, except for the non-proprietary version of your shallow hazards assessment; and
- (e) Correlative well information you use to justify your H₂S classification request under Hydrogen Sulfide Information at §§ CFR 250.215(b) and 250.245(b).

Paperwork Reduction Act (PRA) Statement

The collection of information referred to in this NTL provides clarification, description, or interpretation of requirements in 30 CFR 250, subpart B and Form MMS-137. The Office of Management and Budget (OMB) has approved the information collection requirements for this regulation and form and assigned OMB control number 1010-0151 (expires July 31, 2008). This NTL does not impose additional information collection requirements subject to the PRA.

Contact

If you have any questions regarding this NTL, please contact the MMS GOMR Plans Section at (504) 736-2419.

[original signed]
Charles J. Schoennagel
Acting Regional Director

NTL with Attachments A and B

**CONTENTS OF EXPLORATION PLANS (EP's) AND
DEVELOPMENT OPERATIONS COORDINATION DOCUMENTS (DOCD's)**

Definitions

Terms used in this NTL have the following meaning:

Deepwater means those water depths 400 meters (1,312 feet) or greater.

Flower Garden Banks Protective Zone means that area of the GOM OCS consisting of the following blocks:

HI A-351	HI A-364	HI A-376	HI A-384	HI A-395	HI A-403	GB 135	GB 180
HI A-352	HI A-365	HI A-377	HI A-385	HI A-396	HI A-573	GB 136	EB 173
HI A-353	HI A-366	HI A-378	HI A-386	HI A-397	HI A-596	GB 138	EB 217
HI A-354	HI A-367	HI A-379	HI A-387	HI A-398	GB 95	GB 139	
HI A-355	HI A-368	HI A-380	HI A-388	HI A-399	GB 96	GB 140	
HI A-361	HI A-373	HI A-381	HI A-389	HI A-400	GB 97	GB 177	
HI A-362	HI A-374	HI A-382	HI A-390	HI A-401	GB 133	GB 178	
HI A-363	HI A-375	HI A-383	HI A-394	HI A-402	GB 134	GB 179	

HI = High Island; GB = Garden Banks; EB = East Breaks

Stetson Bank Protective Zone means that area of the GOM OCS consisting of the following blocks:

HI A-486	HI A-502	HI A-514
HI A-487	HI A-503	HI A-527
HI A-488	HI A-512	HI A-528
HI A-501	HI A-513	HI A-529

HI = High Island

Plan Contents (§§ 250.211 and 250.241)

(a) Plan Information Form. Use Form MMS-137 (see Attachment A of this NTL) to provide information concerning your proposed activities.

(b) Location. Provide a map (separate from any other required map), at a scale of 1 inch = 2,000 feet on an 8½-inch by 11-inch sheet of paper, that depicts the surface location and water depth of each proposed well and production facility, and the proposed locations of all associated drilling unit and construction barge anchors, including any that will be used for the installation or construction of production facilities or well protector structures. If you do not know the proposed anchor locations, you may show the maximum anchor radius instead.

(c) Safety and pollution prevention features. Provide a brief description of the important safety and pollution prevention features for your drilling unit, production facilities, and lease term pipelines.

(d) Storage tanks and production vessels. Using the format below, provide information on the storage tanks and/or production vessels at the facility you will use to conduct your proposed activities (barges, drilling rigs, platform, etc.) and that will store oil, as defined at 30 CFR 254.6. Include only those tanks with a capacity of 25 barrels or more.

Type of Storage Tank	Type of Facility	Tank Capacity (Barrels)	Number of Tanks	Total Capacity (Barrels)	Fluid Gravity (API)
Fuel Oil	Semi-submersible	250	2	500	No. 2 Diesel.
Production	Platform A	40,000	2	80,000	37°

(e) Pollution prevention measures. For EP's and DOCD's that propose activities for which the State of Florida is an affected State, provide a discussion of the measures you will use to prevent the discharge of oils and greases from drilling rigs or platforms during rainfall and routine operations. (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(f) Additional measures. Provide a discussion of the safety, pollution prevention, and early spill detection measures that you will take beyond those required by 30 CFR part 250 when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).
- (4) Initial DOCD's and supplemental DOCD's with new multiwell structures for which the State of Louisiana is an affected State (15 CFR 930.58(a)(2)).
- (5) Initial EP's and DOCD's and supplemental DOCD's with new multiwell structures for which the State of Texas is an affected State (15 CFR 930.58(a)(2)).

General Information (§§ 250.213 and 250.243)

(a) Applications and permits. Using the format below, provide information on the filing or approval status of the Federal, State, and local application approvals or permits you must obtain to conduct your proposed activities. List all **individual or site-specific** application approvals you must obtain, but do not list **general** National Pollutant Discharge Elimination System (NPDES) permits or Corps of Engineers (COE) permits.

Application/Permit	Issuing Agency	Status
EPA Air Permit	EPA	To be submitted
Individual NPDES Permit	EPA	Approved

(b) Drilling fluids.

(1) Using the format below, provide information on the types (including chemical constituents) and amounts of the drilling fluids you plan to use to drill your proposed wells when you propose the following:

- (i) Activities for which the State of Florida is an affected State.
- (ii) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (iii) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).
- (iv) Initial DOCD's and supplemental DOCD's with new multiwell structures for which the State of Louisiana is an affected State (15 CFR 930.58(a)(2)) and that propose the use of oil-based or synthetic-based drilling fluids.
- (v) Initial EP's and DOCD's and supplemental DOCD's with new multiwell structures for which the State of Texas or the State of Mississippi is an affected State (15 CFR 930.58(a)(2)).

Type of Drilling Fluid	Estimated Volume of Drilling Fluid to be Used per Well
Water-based (seawater, freshwater, barite)	35,000 bbls
Oil-based (diesel, mineral oil)	500 bbls
Synthetic-based (internal olefin, ester)	20,000 bbls

(2) For each oil-based drilling fluid you list in the table above,

- (i) Use the format below to describe its major components, and

Product Name	Amount to be Used	Reference Number
Bentonite	100 50-lb bags	CAS # 1302-78-9
PureDrill IA-35	500 bbls	CAS # 178603-63-9

(ii) Provide a Material Safety Data Sheet (MSDS), MSDS No., or Internet address for the MSDS (or equivalent information) for each product.

(c) Production. For DOCD's only, use the format below to provide information about each type of your anticipated production.

Type	Average Production Rate	Peak Production Rate	Life of Reservoir
Oil	5,000 bbls/day	10,000 bbls/day	20 years
Gas	500 mmcf/d	900 mmcf/d	15 years

(d) Oils characteristics. For DOCD's only, use the format below to provide the chemical and physical characteristics of the oils (see definition under 30 CFR § 254.6) that will be produced, handled, transported, or stored at the facilities you will use to conduct your proposed development and production activities.

Characteristic	Analytical Methodologies Should Be Compatible With:
(1) Gravity (API)	ASTM D4052
(2) Flash Point (°C)	ASTM D93/IP 34
(3) Pour Point (°C)	ASTM D97
(4) Viscosity (Centipoise at 25 °C)	ASTM D445
(5) Wax Content (wt %)	Precipitate with 2-butanon/dichloromethane (1 to 1 volume) at -10 °C
(6) Asphaltene Content (wt %)	IP-Method 143/84
(7) Resin Content (wt %)	Jokuty et al. (1996)
(8) Boiling point distribution including, for each fraction, the percent volume or weight and the boiling point range in degrees C	ASTM D2892 (TBP distillation), or ASTM D2887/5307
(9) Sulphur (wt %)	ASTM D4294

Note: For the distillation information in item no. 8 above, the MMS GOMR may accept the following information in lieu of items nos. 5, 6, 7, and 8: weight percent total of saturates, aromatics, waxes, asphaltenes, and resins; and total BTEX (ppm) using analytical methods compatible with the Hydrocarbon Groups methodology from Jokuty et al. (1996).

Provide information on the oil composition most likely to result in the largest volume spill (e.g., the oil from the expected largest reservoir, stored oil or pipeline oil combined from a number of wells).

Identify the oil you analyze using one of the following formats:

Oil from one well	Oil from more than one well sampled on a facility	Oil from a pipeline system
Area/Block. MMS platform ID. API Well No. Completion perforation interval MMS reservoir name. Sample date. Sample No. (if more than one is taken).	Area/Block. MMS platform ID. Field/Unit. Sample date. Sample No. (if more than one is taken). Listing of API Well Nos. Storage tank ID No. (if sampled at a storage tank).	Pipeline segment number. For each pipeline that feeds into the system, the ID codes for the closest upstream LACT units and/or facility measurement points. Storage tank ID No. (if sampled at a storage tank).

Provide the above two tables only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).

(e) New or unusual technology. If you propose to use new or unusual technology, as defined in § 250.200, to carry out your proposed activities, provide a narrative description of the methodology or technique and the rationale for its selection. In the public information copies of your EP or DOCD, you may exclude any proprietary information from this description. In that case, include a brief discussion of the general subject matter of the omitted information. If you

will not use any new or unusual technology to carry out your proposed activities, include a statement so indicating.

(f) Bonding statement. Provide the following statement regarding your bond coverage:

The bond requirements for the activities and facilities proposed in this [EP][DOCD] are satisfied by a [lease] [area-wide] bond, furnished and maintained according to 30 CFR part 256, subpart I; NTL No. 2000-G16, "Guidelines for General Lease Surety Bonds;" and National NTL No. 2003-N06, "Supplemental Bond Procedures."

(g) Oil spill financial responsibility (OSFR). Provide the following statement regarding your OSFR coverage:

[Company name with MMS company number] [has demonstrated] [will demonstrate] oil spill financial responsibility for the facilities proposed in this [EP][DOCD] according to 30 CFR part 253, and NTL No. 99-N01, "Guidelines for Oil Spill Financial Responsibility for Covered Facilities."

(h) Deepwater well control statement. If you propose to drill a well in deepwater, provide the following deepwater well control statement:

[Company name with MMS company number] [has][will have] the financial capability to drill a relief well and conduct other emergency well control operations.

(i) Suspensions of production. For DOCD's only, provide a brief discussion of any approved or anticipated suspensions of production you have, or will seek, to hold the lease(s) or unit involved with your DOCD in active status.

(j) Blowout scenario. Provide a scenario for a potential blowout of the well (proposed in your EP or DOCD) from which you expect to have the highest volume of liquid hydrocarbons. Include the estimated flow rate, total volume, and maximum duration of the potential blowout. Discuss also the potential for the well to bridge over, the likelihood for surface intervention to stop the blowout, the availability of a rig to drill a relief well, and rig package constraints. Estimate the time it would take to drill a relief well.

Provide this blowout scenario only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).

- (4) Initial DOCD's and supplemental DOCD's with new multiwell structures for which the State of Louisiana is an affected State (15 CFR 930.58(a)(2)).
- (5) Initial EP's and DOCD's and supplemental DOCD's with new multiwell structures for which the State of Texas is an affected State (15 CFR 930.58(a)(2)).

(k) Chemical products. The information at §§ 250.213(c) and 250.243(d) regarding chemical products is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

Geological and Geophysical Information (§§ 250.214 and 250.244)

(a) Geological description. Provide a discussion of the geological objectives, including a brief description of the hydrocarbon trapping elements.

(b) Structure contour maps. Provide current structure contour maps, at a scale of 1 inch = 2,000 feet (depth-based, expressed in feet subsea), drawn on the top of each prospective hydrocarbon sand for EP's, and of each productive hydrocarbon sand for DOCD's, showing the entire lease block, the location of each proposed well, and the locations of geological cross-sections. You may use another scale or coverage area for these contour maps on a case-by-case basis if your activities cover more than one lease block, and if you obtain prior approval from the Regional Supervisor. (Examples of acceptable maps can be found on the MMS website at: <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/structmap1.pdf> and <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/structmap2.pdf>.)

(c) Interpreted two-dimensional (2-D) and/or three-dimensional (3-D) seismic lines. Provide page-size copies of migrated and annotated (shot points, time lines, well paths) 2-D and/or 3-D seismic lines with depth scale within 152 meters (500 feet) of the surface locations of your proposed wells. Provide this information as an enclosure to one proprietary copy of your EP. You are not required to provide this information if the MMS GOMR has approved the surface locations of your proposed wells in previously submitted EP's and DOCD's.

(d) Geological structure cross-sections. Provide interpreted geological structure cross-sections showing the location and depth of each proposed well for EP's, and expected productive formations for DOCD's. In addition, show at least one key horizon and the objective sands, and label them using standard biostratigraphic terms. Express all depths in feet. (An example of an acceptable cross-section may be found on the MMS website at: <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/xsection.pdf>).

(e) Shallow hazards report. If your proposed activities are in water depths less than 400 meters (1,312 feet), provide two copies of a shallow hazard report based on information obtained from a high-resolution geophysical survey, or a reference to such report if you have already submitted it to the Regional Supervisor. If your proposed activities are in water depths 400 meters (1,312 feet) or more, provide three copies of the report. If the report covers multiple leases, provide a listing. Refer to NTL No. 98-20, "Shallow Hazards Requirements" for guidelines. (NOTE: If you combine an archaeological report with your shallow hazards report, then you will need to provide a total of three copies for activities in water depths less than 400 (1,312 feet) meters and four copies for activities in water depths more than 400 meters (1,312 feet).)

(f) Shallow hazards assessment. Provide, for each well proposed at an unapproved surface location, an assessment of any seafloor and subsurface geological and manmade features and conditions that may adversely affect your drilling operations, prepared using the guidance in NTL No. 98-20. For wells or platforms proposed at approved surface locations, include a statement to this effect in lieu of an assessment. Include a non-proprietary version of this item for those EP's or DOCD's that require CZMA consistency review.

(g) High-resolution seismic lines. Provide an annotated (shot points, time lines, well surface locations, and proximity of wells to line) copy of the high-resolution survey line (shallow penetration subbottom profiler; medium penetration seismic profiler; and sidescan sonar in areas of complex seafloor such as fault scarps, mud mounds, and mud lobes) closest to each of the proposed well locations. Provide this information as an enclosure to one proprietary copy of your EP or DOCD. You are not required to provide this information if the MMS GOMR has approved the surface locations of your proposed wells in previously submitted EP's and DOCD's.

For activities proposed in deepwater, you may replace the high-resolution survey lines with 3-D survey information on a case-by-case basis if you provide the following displays: swath bathymetry/seafloor rendering/edge detection (fault scarp trends) overlain with the seafloor amplitude. However, the vertical resolution of the 3-D surveys is usually not sufficient to detect potential drilling hazards in a complex area (numerous faults, gas vents, slumps, hard bottoms, etc.). Therefore, in a complex area, you may *not* replace high-resolution survey lines with 3-D survey information. However, in deepwater areas, you are not required to provide sidescan sonar data in water depths greater than 300 meters (984 feet) or magnetometer lines in water depths greater than 200 meters (656 feet) if you obtain the prior approval of the Regional Supervisor on a case-by-case basis.

(h) Stratigraphic column. For EP's only, provide a generalized biostratigraphic/lithostratigraphic column from the seafloor to the total depth of each prospect. Label objective horizons on the column. (An example of an acceptable stratigraphic column may be found on the MMS website at: <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/stratcolumn.pdf>.)

(i) Time vs. depth tables. For EP's proposing activities in areas where there is no well control, provide seismic travel time versus depth tables showing intervals of not more than 10 milliseconds.

(j) Geochemical information. The information at §§ 250.214(j) and 250.244(j) regarding geochemical reports is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

(k) Future G&G activities. The information at §§ 250.214(k) and 250.244(k) regarding future G&G activities is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

Hydrogen Sulfide (H₂S) Information (§§ 250.215 and 250.245)

(a) Concentration. Provide the estimated concentration of any H₂S you might encounter or handle while conducting your proposed activities.

(b) Classification. Pursuant to § 250.490(c), request that the Regional Supervisor classify the area of your proposed activities as either H₂S absent, H₂S present, or H₂S unknown. Provide sufficient information to justify your request (e.g., concentrations from at least one correlative well).

(c) H₂S Contingency Plan. If you request that the Regional Supervisor classify the area of your proposed activities as either H₂S present or H₂S unknown, provide one of the following:

(1) An H₂S Contingency Plan prepared according to § 250.490(f);

(2) A reference to an approved or submitted H₂S Contingency Plan that covers the proposed activities; or

(3) The following statement:

[Company name] will submit to the appropriate MMS GOMR district office an H₂S Contingency Plan prepared according to 30 CFR 250.490(f) before conducting the proposed [exploration][development and production] activities.

(d) Modeling report. If you have determined or estimated that you will encounter or handle H₂S at concentrations greater than 500 parts per million (ppm), model a potential worst-case accidental H₂S release from the facilities you will use to conduct your proposed activities. Provide two copies of the modeling report or the modeling results (see § 250.490), or a reference to such report or results if they have already been submitted to the Regional Supervisor. Include the meteorological data you use in the modeling (as an ASCII-formatted model input file). The analysis in the report should be specific to the particular site of your activity, and should consider any nearby human-occupied OCS facilities, shipping lanes, fishery areas, and other points where humans may be subject to potential exposure from an H₂S release from your proposed activities. If your projected emissions would effect a concentration of H₂S of 10 ppm or greater at an onshore area, the modeling analysis should be consistent with the risk management plan (RMP) methodologies of the Environmental Protection Agency (EPA) outlined in 40 CFR part 68.

Mineral Resource Conservation Information (§ 250.246)

(a) Technology and reservoir engineering practices and procedures. For DOCD's only, provide a brief description of the technology and reservoir engineering practices and procedures you will use to increase the ultimate recovery of oil and gas (e.g., secondary, tertiary, or other enhanced recovery practices). If enhanced recovery practices are not going to be used initially, provide an explanation of the methods you considered and the reasons why you are not using them.

(b) Technology and recovery practices and procedures. For DOCD's only, provide a brief description of the technology and recovery practices and procedures you may use to ensure optimum recovery of oil and gas and/or sulphur.

(c) Reservoir development. For DOCD's only, provide a brief discussion of your exploratory well results, other reservoir data, proposed well spacing, completion methods, and other relevant well plan information.

Biological, Physical, and Socioeconomic Information (§§ 250.216 and 250.247)

(a) Chemosynthetic communities report. If you propose activities that could disturb seafloor areas in deepwater, provide the report described in Attachment B of NTL No. 2000-G20, "Deepwater Chemosynthetic Communities."

(b) Topographic features map. If you propose bottom-disturbing activities (including rig placement, and rig or construction barge use of anchors, chains, cables, and wire ropes) within 305 meters (1,000 feet) of the "No Activity Zone" of an identified topographic feature, provide the map described in Attachment 2, Section A, Item No. 1 of NTL No. 2004-G05 "Biologically Sensitive Areas of the Gulf of Mexico."

(c) Topographic features statement (shunting). For EP's only, if you propose to drill more than two wells from the same surface location and that surface location is outside the 1-mile Zone but within the Protective Zone of an identified topographic feature, provide a statement described in Attachment 2, Section A, Item No. 2 of NTL No. 2004-G05 "Biologically Sensitive Areas of the Gulf of Mexico."

(d) Live bottoms (Pinnacle Trend) map. If you have the live bottom (Pinnacle Trend) stipulation attached to your lease, and you propose bottom-disturbing activities (including rig placement, and rig or construction barge use of anchors, chains, cables, and wire ropes) within 61 meters (200 feet) of any pinnacles, include the map described in Attachment No. 4, Section A of NTL No. 2004-G05 "Biologically Sensitive Areas of the Gulf of Mexico."

The OCS blocks affected by this stipulation are Main Pass Area, Blocks 190, 194, 198, 219-226, 244-266, 276-290; and Viosca Knoll Area, Blocks 473-476, 521, 522, 564-566, 609, 610, 654, 692-698, 734, and 778.

(e) Live bottoms (low relief) map. If you have the Live Bottom (low relief) stipulation attached to your lease, provide the map described in Attachment 6, Section A of NTL No. 2004-G05, "Biologically Sensitive Areas of the Gulf of Mexico."

(f) Potentially sensitive biological features. If you propose bottom-disturbing activities (including rig placement, and rig or construction barge use of anchors, chains, cables, and wire ropes) within 30 meters (100 feet) of potentially sensitive biological features, include the map described in Attachment 8, Section A of NTL No. 2004-G05, "Biologically Sensitive Areas of the Gulf of Mexico."

(g) Remotely operated vehicle (ROV) monitoring survey plan. If you propose activities that could disturb seafloor areas in deepwater, provide an ROV monitoring survey plan prepared by using the guidance in NTL No. 2003-G03, “Remotely Operated Vehicle Surveys in Deepwater.”

(h) Threatened and endangered species information. For EP’s and DOCD’s proposing activities for which the State of Florida is an affected State, provide detailed information on the presence of threatened and endangered species in the area of the proposed activities. (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(i) Archaeological report. When you propose bottom-disturbing activities in areas that the MMS GOMR has identified as having a potential for containing historic or prehistoric archaeological resources, provide three copies of an archaeological report or a reference to such a report if it has already been provided to the Regional Supervisor. Refer to NTL No. 2005-G07, “Archaeological Surveys and Reports,” and NTL No. 2006-G07, “Revisions to the List of OCS Lease Blocks Requiring Archaeological Resource Surveys and Reports,” for guidelines. (NOTE: Provide four copies of a combined archaeological/shallow hazards report for activities in water depths greater than 400 meters (1,312 feet).)

For EP’s and DOCD’s proposing activities for which the State of Florida is an affected State, provide a discussion of the presence and description of any historic and prehistoric archaeological resources that could be affected by the proposal, and measures to protect these resources. Describe the surveys you used to locate and identify these resources. (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(j) Air and water quality information. For EP’s and DOCD’s proposing activities for which the State of Florida is an affected State, provide a discussion of air and water quality in and adjacent to the area of the proposed activities. (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(k) Socioeconomic information. Provide the following socioeconomic information: (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(1) The estimated number of persons you expect to employ in support of your offshore, onshore, and transportation activities within the State of Florida and, where possible, the approximate number of new employees and families likely to move into the affected area;

(2) An estimate of the major supplies, services, energy, water, or other resources you expect to purchase within the State of Florida and that are necessary for you to carry out the EP or DOCD; and

(3) The types of contractors or vendors within the State of Florida you will need to carry out the EP or DOCD.

Waste and Discharge Information (§§ 250.217 and 250.248)

(a) Projected generated wastes. Using the format below, provide information on the projected solid and liquid wastes likely to be generated by your proposed activities. Include both operational wastes permitted by the appropriate NPDES permit and any other identified wastes.

Type of Waste	Composition	Projected Amount
Spent drilling fluids	Water-based drilling muds	8,000 bbls/well
Cuttings containing Synthetic-based mud	Cuttings coated with ester-based Synthetic drilling muds	600 bbls/well
Chemical product waste	Ethylene glycol Methanol	100 bbls/month 25 bbls/month
Trash	Refuse generated during painting operations	50 bbls/month

Describe also your plans for treating, storing, or downhole disposal of these wastes at your facility locations(s).

Provide this table and description only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To use new or unusual technology that changes the nature or magnitude of the waste stream.
- (4) To use a sulphur recovery unit(s).
- (5) Deepwater development operations. (You may omit this table if you propose operations in an exempted area.) Refer to the MMS website at http://www.gomr.mms.gov/homepg/regulate/environ/ea_grid/ea_grid.asp.
- (6) Initial EP's, Initial DOCD's, or Supplemental DOCD's with new multiwell structures for which the State of Texas or the State of Mississippi is an affected State (15 CFR 930.58(a)(2)).
- (7) Initial or supplemental DOCD's for which the State of Alabama is an affected State (15 CFR 930.58(a)(2)).
- (8) Initial DOCD's or Supplemental DOCD's with new multiwell structure that includes disposal in Louisiana State waters or onshore Louisiana (15 CFR 930.58(a)(2)).

(b) Projected ocean discharges. If any of your solid and liquid wastes are to be discharged overboard, use the format below to provide the following information.

Type of Waste	Total Amount to be Discharged	Discharge Rate	Discharge Method
Spent drilling fluids and cuttings containing synthetic-based mud	5,000 bbls	200 bbls/day	Shunt through downpipe to 40 feet above the mudline.
Chemical product wastes	50 bbls	2 bbls/day	Add to produced water stream.

Provide this table only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To use new or unusual technology that changes the nature or size of the waste stream.
- (4) Deepwater development operations. (You may omit this table if you propose operations in an exempted area). Refer to the MMS website at http://www.gomr.mms.gov/homepg/regulate/environ/ea_grid/ea_grid.asp.
- (5) Initial EP's, Initial DOCD's, or Supplemental DOCD's with new multiwell structures for which the State of Texas or the State of Mississippi is an affected State (15 CFR 930.58(a)(2)).
- (6) Initial or supplemental EP's or DOCD's for which the State of Alabama is an affected State (15 CFR 930.58(a)(2)).

(c) Modeling report. If you model the trajectory or fate of discharges of the projected solid or liquid wastes generated by your proposed activities, provide two copies of the modeling report or the modeling results, or a reference to such report or results if it has already been submitted to the Regional Supervisor. Include the oceanographic data you used in the modeling in the report. If you plan to model, consult with the Regional Supervisor for further guidance on preparing the modeling report. Provide this report only when you propose activities for which the U.S. Environmental Protection Agency requires an *individual* NPDES permit.

(d) NPDES permits. The information at §§ 250.217(c) and 250.248(c) regarding NPDES permits is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

(e) Cooling water intakes. The information at §§ 250.217(e) and 250.248(e) regarding cooling water intakes is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

Air Emissions Information (§§ 250.218 and 250.249)

(a) Emissions worksheets and screening questions. If any of the activities proposed in your EP or DOCD take place at the site of an existing facility or well, prepare two different emissions worksheets. The calculated emissions that are associated with the activities proposed in the current EP or DOCD submission are referred to as Plan Emissions. Complex Total Emissions are the Plan Emissions plus projected emissions from all existing co-located facilities and activities (i.e., those that are at the same surface location as your proposed activities, including any group of structures interconnected with walkways or bridges). If there are no existing facilities or activities co-located with your currently proposed activities, then state that the Complex Total Emissions are the same as the Plan Emissions, and prepare only one emissions worksheet.

(1) Emissions worksheets. Calculate the Plan Emissions and the Complex Total Emissions associated with your proposed activities using the methodology, emission factors, and worksheets in Form MMS-138 for EP's and Form MMS-139 for DOCD's. These forms are on the MMS website at: <http://www.gomr.mms.gov/homepg/mmsforms/frmindx.html>.

Depending on your answers to the screening questions in paragraph (2) below, you may need to include the worksheets in your EP or DOCD.

In calculating your Plan Emissions and Complex Total Emissions:

(i) You may base the emissions on the maximum rated capacity of the equipment associated with your activities, or by using emission reduction measures or modified emission factors. If you base your emissions calculations on the use of emission reduction measures or modified emission factors, you will need to submit the worksheets and the documentation described in paragraphs (d)(1) and/or (d)(2) below.

(ii) If you have not determined the specific drilling unit you will use, use the maximum emission estimates for the *type* of drilling unit (i.e., jackup, platform rig, barge, submersible, semisubmersible, or drillship) in your calculations. You can find the maximum emission estimates for each drilling unit type on the MMS website at: <http://www.gomr.mms.gov/homepg/regulate/envIRON/airquality/reporting.html>.

(2) Screening questions. For EP's, use the format below to answer questions regarding your calculated air emission amounts.

Screening Questions for EP's	Yes	No
Is any calculated Complex Total (CT) Emission amount (tons) associated with your proposed exploration activities more than 90% of the amounts calculated using the following formulas: $CT = 3400D^{2/3}$ for CO, and $CT = 33.3D$ for the other air pollutants (where D = distance to shore in miles)?		
Do your emission calculations include any emission reduction measures or modified emission factors?		
Are your proposed exploration activities located east of 87.5° W longitude?		
Do you expect to encounter H ₂ S at concentrations greater than 20 parts per million (ppm)?		
Do you propose to flare or vent natural gas for more than 48 continuous hours from any proposed well?		
Do you propose to burn produced hydrocarbon liquids?		

For DOCD's, use the format below to answer questions regarding your calculated air emission amounts.

Screening Questions for DOCD's	Yes	No
Is any calculated Complex Total (CT) Emission amount (tons) associated with your proposed development and production activities more than 90% of the amounts calculated using the following formulas: $CT = 3400D^{2/3}$ for CO, and $CT = 33.3D$ for the other air pollutants (where D = distance to shore in miles)?		
Do your emission calculations include any emission reduction measures or modified emission factors?		
Does or will the facility complex associated with your proposed development and production activities process production from eight or more wells?		
Do you expect to encounter H ₂ S at concentrations greater than 20 parts per million (ppm)?		
Do you propose to flare or vent natural gas in excess of the criteria set forth under § 250.1105(a)(2) and (3)?		
Do you propose to burn produced hydrocarbon liquids?		
Are your proposed development and production activities located within 25 miles (40 kilometers) from shore?		
Are your proposed development and production activities located within 124 miles (200 kilometers) of the Breton Wilderness Area?		

In calculating CT for addressing the first question, express the distance to shore (D) in tenths of a statute mile for distances up to 20 miles, and in whole statute miles for distances 20 miles and beyond. Use the nearest point of any land, which is the distance from the facility complex to the mean high water mark of any State, including barrier islands and shoals, to determine the distance to shore.

(b) If you answer **no** to **all** of the above screening questions from the appropriate table, provide

(1) Summary information regarding the peak year emissions that will be generated by and associated with your Plan Emissions and Complex Total Emissions. This information is compiled on the summary form of the two sets of worksheets, and you can submit either these summary forms or the format below. You do not need to include the entire set of worksheets.

Air Pollutant	Plan Emission Amounts ¹ (tons)	Calculated Exemption Amounts ² (tons)	Calculated Complex Total Emission Amounts ³ (tons)
Carbon monoxide (CO).			
Particulate matter (PM).			
Sulphur dioxide (SO ₂).			
Nitrogen oxides (NO _x).			
Volatile organic compounds (VOC).			

Footnotes:

¹ For activities proposed in your EP or DOCD, list the projected emissions calculated from the worksheets.

² List the exemption amounts for your proposed activities calculated by using the formulas in § 250.303(d).

³ List the complex total emissions associated with your proposed activities calculated from the worksheets.

(2) The name, telephone number, and e-mail address of a contact who can answer questions regarding calculations of the projected Plan Emissions, Complex Total Emissions, and exemption amounts.

(3) Following your submittal of the summary information, the MMS GOMR may need you to submit the entire set of worksheets regardless of your response to the above screening questions. The MMS GOMR will make this determination on a case-by-case basis.

(c) If you answer **yes** to **any** of the above screening questions from the appropriate table, provide

(1) Worksheets. A set of worksheets showing the emission calculations for your Plan Emissions and, if different, a set of worksheets showing the emission calculations for the Complex Total Emissions.

(2) Contact(s). The name, telephone number, and e-mail address of the person(s) who calculated the projected Plan Emission, Complex Total Emission, and exemption amounts.

(d) In addition, if the screening results indicate that you are to submit worksheets, you may need to submit one or more of the following:

(1) Emission reduction measures. If your calculation of the projected Plan Emission or Complex Total Emission amounts includes emissions reduction measures, submit your worksheets and also use the format below to describe the emission reduction measures. You may use actual fuel usage information (e.g., run times, fuel consumption). If you do, provide 6 to 12 months of data for determining the average fuel usage. The actual fuel usage you use in the emissions calculations cannot be less than the average fuel usage.

Emission Source	Reduction Control Method	Amount of Reduction	Monitoring System
Compressor	Clean burn technology	100 tons NO _x /year	Periodic stack test
Prime mover	Low sulphur fuel	10 tons SO ₂ /year	Visual check of fuel color and fuel receipts
Prime mover	Actual fuel consumption	300 tons NO _x /year	Fuel log
Generator	Actual run time	100 tons NO _x /year	Run time log

(2) Verification of nondefault emission factors. If you use any air emission factors less than the default values in your calculation of the projected Plan Emission or Complex Total Emission amounts, provide documentation supporting the use of the smaller emission factors. However, if the actual emission factor is known to be greater than the default emission factor, use the actual emission factor.

(3) Non-exempt activities. If the calculated Complex Total Emission amount for any pollutant (CO, PM, SO₂, NO_x, or VOC) is greater than the respective emission exemption amount (E) calculated using the following formulas: $E = 3400D^{2/3}$ for CO, and $E = 33.3D$ for the

other air pollutants (i.e., the formulas in § 250.303(d)), provide a description of how you will comply with § 250.303(e) through (i), as appropriate.

(4) **Modeling report.** If you are required by § 250.303 to use an MMS-approved air quality model to model projected air emissions, adhere to the guidelines in Appendix W of 40 CFR part 51 in conducting the modeling and preparing the report. Provide two copies of the modeling report and the modeling results, along with a digital copy (in ASCII format) of the input and output files (including the meteorological data you used in the modeling), or a reference to the report, files, and results if they have already been submitted to the MMS GOMR.

Oil Spills Information (§§ 250.219 and 250.250)

Provide the following information regarding potential spills of oil (see definition under 30 CFR 254.6):

(a) **Oil spill response planning.** The oil spill response plan (OSRP) required by either paragraph (1) or (2) below:

(1) If you propose activities for which the State of Florida is an affected State, a *site-specific* OSRP prepared according to the requirements of 30 CFR 254.21-29 and that specifically addresses the activities proposed in your EP or DOCD, or a subregional OSRP prepared according to the guidance of NTL No. 2002-G09, “Regional and Subregional Oil Spill Response Plans.” If your lease is subject to the special oil spill response lease stipulation, incorporate in your site-specific or subregional OSRP a detailed description of the equipment you will procure to satisfy the requirements of the stipulation and a timetable for its onsite deployment or availability.

(2) If you propose activities in the Central or Western Planning Areas of the GOM, a reference to your approved regional OSRP (see 30 CFR 254.3), or activities for which the State of Florida is an affected State, a reference to your approved subregional OSRP, to include the following:

(i) **Regional or subregional OSRP information.** The following statement regarding your OSRP:

All the proposed activities and facilities in this [EP or DOCD] will be covered by the Oil Spill Response Plan filed by [*Company name with MMS company number*] in accordance with 30 CFR 254 and approved on [*Date*].

(ii) **Spill response sites.** Using the format below, information on the location of your primary spill response equipment and the location of your planned staging area(s) that would be used should you have an oil spill resulting from the activities proposed in your EP or DOCD;

Primary Response Equipment Location	Preplanned Staging Location(s)
Houma, LA	Fourchon, LA; Grand Isle, LA

(iii)OSRO information. The name(s) of your oil spill removal organization(s) for both equipment and personnel.

(iv)Worst-case scenario determination. If you have an approved regional OSRP, provide a comparison of the appropriate worst-case scenario from your approved regional OSRP with the worst-case scenario from the proposed activities in your EP or DOCD. Refer to the sample chart below. Use this comparison to aid you in determining whether the worst-case scenario from your approved regional OSRP is superseded by the worst-case scenario from the proposed activities in your EP or DOCD. For EP's, because estimated blowout flow rates are speculative, you should not ordinarily determine that the worst-case scenario from the proposed activities in your EP supersedes the appropriate worst-case scenario from your approved regional OSRP unless its volume is substantially larger. (Reminder: In making this determination, also consider proximity to beaches, waterfowl, other marine and shoreline resources, and areas of special economic or environmental importance.)

Category	Regional OSRP	EP or DOCD
Type of Activity ¹	Production – Subsea completion	Development – Platform drilling rig
Facility Location (area/block)	EI 250	MC 900
Facility Designation ²	Well No. 2	Rio Loco Project
Distance to Nearest Shoreline (miles)	45 miles	160 miles
Volume ³		
Storage tanks (total)	0 bbls	200 bbls
Flowlines (on facility)	40 bbls	15 bbls
Lease term pipelines	1,600 bbls	400 bbls
Uncontrolled blowout (volume per day)	2,700 bbls	600 bbls
Total Volume	4,665 bbls	1,215 bbls
Type of Oil(s) - (crude oil, condensate, diesel)	Crude oil.	Crude oil.
API Gravity(s) ⁴	37°	37°

Footnotes:

- Types of activities include pipeline, platform, caisson, subsea completion or manifold, and mobile drilling rig.
- E.g., Well No. 2, Platform JA, Pipeline Segment No. 6373.
- Take your regional OSRP worst-case scenario volume from the appropriate section of your regional OSRP. For EP's, the worst-case scenario volume is the daily volume possible from an uncontrolled blowout. Determine this volume using the provisions of 30 CFR § 254.47(b). For DOCD's, determine the volume of your worst-case scenario using the provisions of 30 CFR § 254.47(a) or (b), as appropriate.
- Provide API gravity of all oils given under "Type of Oil(s)" above. Estimate for EP's.

(A) If your proposed activities are within ten miles seaward of the coastline, reference the "near-shore" worst-case scenario provided in your approved regional OSRP. If your proposed activities are ten miles or more seaward from the coastline, reference the "far-shore" worst-case scenario provided in your approved regional OSRP. Where applicable, reference the worst case scenario for your leases and facilities located in the Flower Garden Banks Oil Spill Planning Area (see Appendix H of NTL No. 2002-G09, "Regional and Subregional Oil Spill Response Plans"). Where applicable, reference the worst-case scenario for your mobile rig exploration drilling operations. For each worst-case scenario, identify clearly the specific scenario in the reference.

(B) If you determine that the worst-case scenario from the activities proposed in your EP or DOCD supersedes the worst-case scenario from your approved regional OSRP,

modify your approved regional OSRP to incorporate this new worst-case scenario and provide the following statement:

[*Name of company*] submitted the new worst-case scenario to the MMS GOMR on [*date*] for inclusion in our regional or subregional OSRP.

The EP or DOCD will not be approved until the Regional Supervisor has received and approved your regional or subregional OSRP worst-case scenario modification.

(C) If you determine that the worst-case scenario from the activities proposed in your EP or DOCD does not supersede the worst-case scenario in your approved regional or subregional OSRP, provide the following statement:

Since [*name of company*] has the capability to respond to the appropriate worst-case spill scenario included in its regional OSRP approved on [*date*], and since the worst-case scenario determined for our [*EP*] [*DOCD*] does not replace the appropriate worst-case scenario in our regional or subregional OSRP, I hereby certify that [*name of company*] has the capability to respond, to the maximum extent practicable, to a worst-case discharge, or a substantial threat of such a discharge, resulting from the activities proposed in our [*EP*] [*DOCD*].

(b) Oil spill response discussion. Discuss your response to an oil spill resulting from the activities proposed in your EP or DOCD. Include all the information described in 30 CFR 254.26(b), (c), (d), and (e) that is applicable. As the source of the spill, use whichever of the following gives the greater volume of oil:

(1) The blow-out scenario you describe in paragraph (j) under General Information (§§ 250.213 and 250.243) above; or

(2) The volume of the largest oil/fuel storage tank on the drilling rig or facility.

Provide this oil spill response discussion only when you propose the following:

- (i) Activities for which the State of Florida is an affected State.
- (ii) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (iii) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).
- (iv) Initial DOCD's and supplemental DOCD's with new multiwell structures for which the State of Louisiana is an affected State (15 CFR 930.58(a)(2)).
- (v) Initial EP's and DOCD's and supplemental DOCD's with new multiwell structures for which the State of Texas is an affected State (15 CFR 930.58(a)(2)).

(c) Modeling report. If you model a potential oil or hazardous substance spill, provide two copies of the modeling, or a reference to such a report if it has already been provided to the Regional Supervisor. Include the oceanographic data used in the modeling in the report. If you plan to model, contact the Regional Supervisor for guidance on preparing the report.

Provide this modeling report only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).

Environmental Monitoring Information (§§ 250.221 and 250.252)

(a) Monitoring systems. Provide a description of any existing and planned monitoring systems that are measuring, or will measure, environmental conditions and/or will provide project-specific data or information on the impacts of your proposed activities.

(b) Flower Garden Banks National Marine Sanctuary. If you propose to conduct activities within the Protective Zones of the Flower Garden Banks and Stetson Bank, discuss your provisions for monitoring the impacts of an oil spill on the environmentally sensitive resources of the Flower Garden Banks National Marine Sanctuary.

Lease Stipulations Information (§§ 250.222 and 250.253)

Provide a brief description of the measures you took, or will take, to satisfy the conditions of any lease stipulations related to your proposed activities.

Environmental Mitigation Measures Information (§§ 250.223 and 250.254)

For EP's and DOCD's that propose activities for which the State of Florida is an affected State, provide a description of the measures you will take to avoid, minimize, and mitigate impacts to marine and coastal environments and habitats, biota, and threatened and endangered species. (The State of Florida has identified this information as necessary data and information under 15 CFR § 930.58(a)(2).)

Decommissioning Information (§ 250.255)

The information at § 250.255 regarding decommissioning is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

Related Facilities and Operations Information (§ 250.256)

(a) Related OCS facilities and operations. For DOCD's only, provide a description and location of any proposed or existing drilling units, production platforms, pipeline accessory platforms, host facilities, pipelines and associated umbilicals (including those that transport chemical products and produced water), or other facilities and operations located on the OCS (regardless of ownership) that directly relate to your proposed development or production activities. This description should include the size, length, proposed routes, product(s) being transported, maximum flow rates, and the shut-in time of any proposed pipelines.

Provide this related facilities and operations information only for the following:

- (1) All initial and supplemental DOCD's.
- (2) All revised DOCD's, but only for those facilities and operations that will change as the result of the activities proposed in the revised DOCD.

(b) Transportation system. For DOCD's only, provide a discussion of the transportation system that will be used to transport your production to shore (including the routes of any new pipelines) and a description and location of the primary onshore terminal (including any refineries, gas plants, and compressor stations that will be built or undergo major expansion as the result of the activities proposed in your DOCD).

(c) Produced liquid hydrocarbons transportation vessels. If produced liquid hydrocarbons, including well test fluids, will be transported by means other than a pipeline, use the format below to provide information on the alternative method.

Transport Method	Vessel Capacity	Average Volume to be Loaded (per transfer)	No. of Transfers (Yearly Average)
Shuttle tanker	50,000 bbls	40,000 bbls	52

In addition, provide a description of the method you will use to transfer the liquid hydrocarbons to the transporting vessel.

Support Vessels and Aircraft Information (§§ 250.224 and 250.257)

(a) General. Using the format below, provide information regarding the vessels (e.g., tug boats, anchor-handling vessels, construction barges, lay barges, supply boats, crew boats) and aircraft you will use to support your proposed activities. If specific vessels have not yet been determined, use the maximum capacities, numbers, and trip frequencies for the types of vessels you will use.

Type	Maximum Fuel Tank Storage Capacity	Maximum No. in Area at Any Time	Trip Frequency or Duration
Tug boats	3000 bbls	2	Every two weeks
Supply boats	500 bbls	2	Three times weekly

Type	Maximum Fuel Tank Storage Capacity	Maximum No. in Area at Any Time	Trip Frequency or Duration
Service boats	500 bbls	1	Daily
Crew boats	500 bbls	1	Weekly

(b) Diesel oil supply vessels. Using the format below, provide additional information on the vessels you will use to supply diesel oil. Make sure you include any vessels that will transfer diesel oil you will use for purposes other than fuel (e.g., base for corrosion control fluids). If the specific fuel supply vessel has not yet been determined, use the maximum size, fuel capacity, and trip frequency for the type of vessel you will use.

Size of Fuel Supply Vessel	Capacity of Fuel Supply Vessel	Frequency of Fuel Transfers	Route Fuel Supply Vessel Will Take
180 feet	1,500 bbls	Weekly	From the shorebase in Fourchon, LA, to XYZ Field, then to WC Block 134.

Provide this table only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).
- (4) Initial and supplemental DOCD's for which the State of Alabama is an affected State (15 CFR 930.58(a)(2)).
- (5) Initial DOCD's and supplemental DOCD's with new multiwell structures for which the State of Louisiana is an affected State (15 CFR 930.58(a)(2)).

(c) Drilling fluids transportation. If you propose activities for which the State of Florida is an affected State, use the format below to provide information on the projected drilling fluids you will transport from the onshore support facilities you will use to your drilling unit or facilities.

Type of Material	Quantity Being Transported	Transportation Method
Barite	10-50 lb bags	On flats on supply boat
Synthetic-base drilling fluid component	55 gallons	Drums on St. Mary Mud Company's supply boat

(d) Solid and liquid wastes transportation. If you plan to transport any of your solid and liquid wastes from the site of your proposed activities to other offshore structures or to temporary or permanent onshore facilities for storage or disposal, use the format below to provide the following information:

Type of Waste Approx. Composition	Total Amount	Name/Location	Rate	Transport Method
Spent oil-based drilling fluids	1,000 bbls	XYZ Company, St. Mary, LA	200 bbls/day	Cuttings boxes on barges
Chemical product wastes	100 bbls	Mars Facility, Morgan City, LA	2 bbls/day 4 bbls/day	Drums on crew boat Drums on crew boat
Trash and debris	1,000 ft ³	Morgan City municipal landfill.	N/A	Storage bins on crew boat

Provide this table only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) Activities within the Protective Zones of the Flower Garden Banks and Stetson Bank.
- (3) To use new or unusual technology that changes the nature or magnitude of the waste stream on the facility.
- (4) Deepwater development operations. (You may omit the table if you propose operations in an exempted area.) Refer to the MMS website at http://www.gomr.mms.gov/homepg/regulate/environ/ea_grid/ea_grid.asp
- (5) To use a sulphur recovery unit on the facility.
- (6) Initial and supplemental DOCD's for which the State of Alabama is an affected State (15 CFR 930.58(a)(2)).
- (7) Initial DOCD's or supplemental DOCD's with new multiwell structures that include disposal in Louisiana coastal waters or onshore Louisiana (15 CFR 930.58(a)(2)).
- (8) Initial EP's and DOCD's and supplemental DOCD's with new multiwell structures for which the State of Texas is an affected State (15 CFR 930.58(a)(2)).

(e) Vicinity map. Provide a map at an appropriate scale showing the location of your proposed activities relative to the shoreline, the distance of your proposed activities from the shoreline, and the primary route(s) of the support vessels and aircraft you will use when traveling between the onshore support facilities you will use and your drilling unit or proposed facilities.

Onshore Support Facilities Information (§§ 250.225 and 250.258)

(a) General. Using the format below, provide a listing of the onshore facilities you will use to provide supply and service support for your proposed activities:

Name	Location	Existing/New/Modified
XYZ Mud Company	Port Fourchon, LA	Existing
Fourchon Service Base	Port Fourchon, LA	Expansion

(b) Support base construction or expansion. If you plan to construct a new onshore support base, or expand an existing one to accommodate the activities proposed in your EP or DOCD, provide a description of the necessary work. For EP's and DOCD's for which the State of Florida is an affected State, provide a complete description of any dredging or filling activities associated with any construction or expansion of facilities in the State of Florida. (The State of Florida has identified this information as necessary data and information under 15 CFR 930.58(a)(2).)

(c) Support base construction or expansion timetable. If you plan to acquire land to construct or expand the onshore support base you will use, provide a timetable for land acquisition (including rights-of-way and easements) and construction or expansion.

Provide this information only when you propose the following:

- (1) Activities for which the State of Florida is an affected State.
- (2) To install a surface facility located in water depths greater than 400 meters (1,312 feet), or a surface facility in any water depth that supports a subsea development in water depths greater than 400 meters (1,312 feet).

(d) Waste disposal. Using the format below, provide information on the onshore facilities you will use to store and dispose of any solid and liquid wastes generated by your proposed activities.

Name/Location of Facility	Type of Waste	Amount	Rate	Disposal Method
PPM Theodore, AL	Hazardous solid: Oil-contaminated produced sand	50 lbs	0.6 lbs/day	Land farming
Smiths Incinerator Tampa, FL	Hazardous liquid: Waste oil	50 bbls	0.5 bbls/day	Incinerator
U.S. Liquids Bourg, LA	Non-hazardous solid: Oil-based drilling muds.	1,000 bbls	200 bbls/day	Stationary treatment
New Park Transfer Station, Venice, LA	Non-hazardous liquid: Workover fluids.	150 bbls	2 bbls/day	Temporary storage

(e) Air emissions. The information at §§ 250.225(b) and 250.258(b) regarding air emissions generated by onshore support facilities is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

(f) Unusual solid and liquid wastes. The information at §§ 250.225(c) and 250.258(c) regarding unusual solid and liquid wastes generated by onshore support facilities is not required to accompany EP's and DOCD's submitted in the MMS GOMR.

Sulphur Operations Information (§ 250.259)

If you are proposing to conduct sulphur operations, provide the following:

(a) Bleedwater. For DOCD's only, a brief discussion of the bleedwater that will be generated by your proposed sulphur operations, including the measures you will take to mitigate the potential toxic or thermal impacts on the environment caused by the discharge of bleedwater.

(b) Subsidence. For DOCD's only, an estimate of the degree of subsidence you expect at various stages of development and production, and a brief description of the measures you will take to mitigate the effects of subsidence on existing or potential oil and gas production, production platforms, and production facilities and to protect the environment.

Coastal Zone Management Act (CZMA) Information (§§ 250.226 and 250.260)

(a) Consistency certification. Provide a Coastal Zone Management Act consistency certification according to 15 CFR 930.76(c) and (d) for each affected State by using the format in Attachment B of this NTL. A State is an affected State when

(1) Your activities are adjacent to a State as shown on the maps on the MMS website at:

http://www.gomr.mms.gov/homepg/offshore/plans_permits/czmmaps.html;

- (2) You propose to use a service or supply base within a State's coastal zone;
- (3) You propose construction or expansion of an onshore base; or
- (4) You propose to store or dispose of solid and liquid wastes within a State's coastal zone.

(b) Other information. Provide information required by 15 CFR 930.76(b). This includes

(1) Information sufficient to support your consistency certification;

(2) Information specifically identified in the State's management program (as originally approved or amended) as necessary data and information, if not provided elsewhere in your EP or DOCD;

(3) For EP's and DOCD's proposing activities for which the State of Florida is an affected State, a cross reference to information specifically identified in Florida's management program and that is provided elsewhere in your EP or DOCD; and

(4) An evaluation that includes a set of findings relating the coastal effects of your proposed activities and their associated facilities to each of the relevant enforceable policies of the State's management program. (See the MMS website at <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/enforpols.pdf> for information each GOM State provided MMS regarding its enforceable policies.). The NOAA-approved enforceable policies are identified in each State's CZMP. Identify the impacts as specifically as possible. For the States of Texas, Mississippi, Alabama, and Florida, state if there are no effects on a particular policy. For Louisiana, state that you have considered all of Louisiana's enforceable policies in making your certification of consistency. When it appears that your proposed activities may not be fully consistent with one or more of Louisiana's enforceable policies, provide a brief statement that identifies the enforceable policy, explains the apparent inconsistency, and describes the measures you will take to ensure that your proposed activities will in fact be consistent. You do not need to make findings with respect to coastal effects for which the management program does not contain enforceable policies. Include discussions of the measures that you will take to avoid or mitigate the probable impacts. Include also an assurance of compliance with existing Federal and State laws, regulations, and resultant enforceable program policies in each affected State's CZMP.

Provide the information in paragraphs (a) and (b) above for all of the following:

- (1) Initial EP's and DOCD's.
- (2) Supplemental EP's and DOCD's for which Florida and Alabama are affected States.
- (3) Supplemental DOCD's proposing new multi-well structures for which Louisiana, Mississippi, and Texas are affected States.
- (4) Revised EP's and DOCD's for which the MMS GOMR determines that the revisions could result in a significant change in the impacts previously identified and evaluated (refer to § 250.285).

Environmental Impact Analysis (EIA) (§§ 250.227 and 250.261)

Provide a *project-specific* environmental impact analysis (EIA) that assesses the potential direct and indirect environmental impacts to offshore and onshore resources that could be affected by your proposed activities. In the EIA, focus on the impacts of your specific project to the extent feasible, rather than providing broad programmatic descriptions of the existing environment and generic impacts such as those provided in MMS's lease sale environmental impact statements.

The MMS GOMR will use the information and analyses provided in your EIA in conducting our environmental review of the proposed activities and will supplement it, as needed, to fulfill the requirements of the National Environmental Policy Act.

Provide an EIA for all Initial and Supplemental EP's and DOCD's. For Revised EP's or DOCD's, you only need address those impact-producing factors (IPF's) and affected resources, and analyze those impacts that are different from those in the original EIA. If the original EP or DOCD did not include an EIA, you do not have to prepare one for a Revised EP or DOCD.

Provide the following information in your EIA.

- (a) IPF's from the proposed activities. Determine all IPF's related to your proposed activities that have the potential to impact the environment. Examples of IPF's are
- (1) air emissions;
 - (2) seafloor disturbance from anchoring and structure emplacement;
 - (3) discharges of drilling muds, cuttings, and produced water;
 - (4) emissions of light and noise;
 - (5) water intakes and discharges;
 - (6) use of service vessels and helicopters;
 - (7) construction or expansion of onshore support facilities;
 - (8) onshore waste disposal; and
 - (9) accidental events including oil spills, chemical spills, blowouts, hydrogen sulfide releases, or large-volume flaring or venting events (for such accidents, describe in terms of volume, duration, etc.).

- (b) Affected environment. Identify the environmental or socioeconomic resources that could be affected by the IPF's related to your proposed activities. These may include offshore or onshore resources that are located some distance away from the actual site of the proposed

activities, yet could be impacted by an IPF such as air emissions, vessel traffic, or an accidental spill. Typical environmental or socioeconomic resources of concern are

- (1) air quality;
- (2) water quality;
- (3) coastal resources, including wetlands, barrier beaches, and seagrasses;
- (4) seafloor biological communities, including topographic features, pinnacle-trend features, low-relief live bottoms, and chemosynthetic communities;
- (5) threatened, endangered, and protected species, including marine mammals, sea turtles, coastal and marine birds, Gulf sturgeon, and beach mice (including critical habitat for endangered species, if designated);
- (6) fisheries resources, including essential fish habitat;
- (7) seafloor archaeological resources, including prehistoric sites and historic shipwrecks;
- (8) State and Federally managed or protected areas, including parks and aquatic preserves, wildlife management areas, wildlife refuges, estuarine sanctuaries, and national seashores; and
- (9) recreational beaches.

(c) Impact analysis. Analyze the direct and indirect impacts of the IPF's you identified in paragraph (a) above on the environmental or socioeconomic resources you identified in paragraph (b) above. Describe the nature, severity, and duration of these impacts. When discussing the impacts of particular IPF's on certain resources, it may not be feasible to provide project-specific impact discussions that are different than those contained in previous impact analyses in environmental impact statements and environmental assessments that have been prepared by the MMS. In such cases, you may briefly summarize these impact discussions and incorporate them by reference. However, whenever possible, focus the discussion on your project. If you determine that a particular resource would not be impacted by the proposed activity, you do not need to provide an analysis for that resource. To assist you in your impact analysis, you may use the worksheet on the MMS website at <http://www.gomr.mms.gov/homepg/regulate/regs/ntls/EIAWorksheet.pdf>.

(d) Environmental hazards. If your proposed activities may be adversely impacted by strong environmental phenomena such as hurricanes or strong sea currents, identify the thresholds (e.g., wind speeds, current speeds) at which such impacts may occur, and briefly describe the consequences of such impacts, and measures you have included in your EP or DOCD to mitigate these impacts.

(e) Alternatives. For DOCD's only, discuss any alternatives that you considered to reduce the environmental impacts of your proposed activities. Describe how each alternative would result in a change in the environmental impact of your proposed activities.

(f) Mitigation measures. Describe any mitigation measures you propose using to avoid or reduce impacts and explain the effectiveness of this mitigation in terms of duration and recovery that might be expected relative to the resource.

(g) Consultation. Provide a list of agencies and persons you consulted regarding potential impacts associated with your proposed activities.

(h) Preparers. List the individuals who prepared the EIA, including their name, title, and relationship to you (employee, consultant, etc.)

(i) References. Include a list of the references that you cite in the environmental impact analysis. Summarize all information you incorporate by reference.

Administrative Information (§§ 250.228 and 250.262)

(a) Exempted information description (public information copies only). Provide a description of the general subject matter of the proprietary information that is included in the proprietary copies of your EP or DOCD or its accompanying information.

(b) Bibliography. If you reference a previously submitted EP, DPP, or DOCD; study report; survey report; or other material in your EP or DOCD or its accompanying information, provide a list (with the MMS GOMR control number, if known) of each referenced document.

OCS PLAN INFORMATION FORM

General Information												
Type of OCS Plan:		Exploration Plan (EP)				Development Operations Coordination Document (DOCD)						
Company Name:					MMS Operator Number:							
Address:					Contact Person:							
					Phone Number:							
					E-Mail Address:							
Lease(s):			Area:			Block(s):			Project Name (If Applicable):			
Objective(s):		Oil	Gas	Sulphur	Salt	Onshore Base:				Distance to Closest Land (Miles):		
Description of Proposed Activities (Mark all that apply)												
Exploration drilling					Development drilling							
Well completion					Installation of production platform							
Well test flaring (for more than 48 hours)					Installation of production facilities							
Installation of caisson or platform as well protection structure					Installation of satellite structure							
Installation of subsea wellheads and/or manifolds					Commence production							
Installation of lease term pipelines					Other (Specify and describe)							
Have you submitted or do you plan to submit a Conservation Information Document to accompany this plan?										Yes	No	
Do you propose to use new or unusual technology to conduct your activities?										Yes	No	
Do you propose any facility that will serve as a host facility for deepwater subsea development?										Yes	No	
Do you propose any activities that may disturb an MMS-designated high-probability archaeological area?										Yes	No	
Have all of the surface locations of your proposed activities been previously reviewed and approved by MMS?										Yes	No	
Tentative Schedule of Proposed Activities												
Proposed Activity						Start Date		End Date		No. of Days		
Description of Drilling Rig						Description of Production Platform						
Jackup		Drillship				Caisson		Tension leg platform				
Gorilla Jackup		Platform rig				Well protector		Compliant tower				
Semisubmersible		Submersible				Fixed platform		Guyed tower				
DP Semisubmersible		Other (Attach Description)				Subsea manifold		Floating production system				
Drilling Rig Name (If Known):						Spar		Other (Attach Description)				
Description of Lease Term Pipelines												
From (Facility/Area/Block)				To (Facility/Area/Block)				Diameter (Inches)		Length (Feet)		

OCS PLAN INFORMATION FORM (CONTINUED)
Include one copy of this page for each proposed well/structure

Proposed Well/Structure Location						
Well or Structure Name/Number (If renaming well or structure, reference previous name):				Subsea Completion		
Anchor Radius (if applicable) in feet:				<table border="1"> <tr> <td>Yes</td> <td>No</td> </tr> </table>	Yes	No
Yes	No					
	Surface Location		Bottom-Hole Location (For Wells)			
Lease No.	OCS		OCS			
Area Name						
Block No.						
Blockline Departures (in feet)	N/S Departure:	F___ L	N/S Departure:	F___ L		
	E/W Departure:	F___ L	E/W Departure:	F___ L		
Lambert X-Y coordinates	X:		X:			
	Y:		Y:			
Latitude/ Longitude	Latitude		Latitude			
	Longitude		Longitude			
	TVD (Feet):	MD (Feet):	Water Depth (Feet):			

Anchor Locations for Drilling Rig or Construction Barge (If anchor radius supplied above, not necessary)

Anchor Name or No.	Area	Block	X Coordinate	Y Coordinate	Length of Anchor Chain on Seafloor
			X =	Y =	
			X =	Y =	
			X =	Y =	
			X =	Y =	
			X =	Y =	
			X =	Y =	
			X =	Y =	

Paperwork Reduction Act of 1995 Statement: The Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires us to inform you that MMS collects this information as part of an applicant's Exploration Plan or Development Operations Coordination Document submitted for MMS approval. We use the information to facilitate our review and data entry for OCS plans. We will protect proprietary data according to the Freedom of Information Act and 30 CFR 250.196. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid Office of Management and Budget Control Number. The use of this form is voluntary. The public reporting burden for this form is included in the burden for preparing Exploration Plans and Development Operations Coordination Documents. We estimate that burden to average 600 hours per response, or 640 with an accompanying EP, or 690 with an accompanying DPP or DOCD, including the time for reviewing instructions, gathering and maintaining data, and completing and reviewing the forms associated with subpart B. Direct comments regarding the burden estimate or any other aspect of this form to the Information Collection Clearance Officer, Mail Stop 4230, Minerals Management Service, 1849 C Street, NW., Washington, DC 20240.

COASTAL ZONE MANAGEMENT CONSISTENCY CERTIFICATION FORMAT

Consistency certification format for all EP's and DOCD's that affect the States of Louisiana, Texas, Mississippi, Alabama, and Florida.

**COASTAL ZONE MANAGEMENT
CONSISTENCY CERTIFICATION**

Type of OCS Plan

Area and Block

Lease Number

The proposed activities described in detail in this OCS Plan comply with
[*Name of State(s)*] approved Coastal Management Program(s) and
will be conducted in a manner consistent with such Program(s).
